# Namespace EasySave.ViewModels

### Classes

#### **BaseViewModel**

Classe abstraite BaseViewModel

#### **JobViewModel**

Classe JobViewModel

**LangueViewModel** 

**MainViewModel** 

# Class BaseViewModel

Namespace: <u>EasySave</u>.<u>ViewModels</u>

Assembly: EasySave.dll

Classe abstraite BaseViewModel

public abstract class BaseViewModel : INotifyPropertyChanged

#### Inheritance

<u>object</u> < BaseViewModel

#### **Implements**

#### **Derived**

JobViewModel, LangueViewModel

#### **Inherited Members**

### **Methods**

### NotifyPropertyChanged(string)

Méthode à appler pour avertir d'une modification

protected void NotifyPropertyChanged(string propertyName = "")

#### **Parameters**

propertyName <u>string</u>♂

Nom de la property modifiée (authomatiquement déterminé si appelé directement dans le setter une property)

# **Events**

# PropertyChanged

Evénement de modification d'une property

public event PropertyChangedEventHandler PropertyChanged

# Event Type

 $\underline{PropertyChangedEventHandler} \boxdot$ 

# Class JobViewModel

Namespace: <u>EasySave</u>.<u>ViewModels</u>

Assembly: EasySave.dll

Classe JobViewModel

```
public class JobViewModel : BaseViewModel, INotifyPropertyChanged
```

#### Inheritance

<u>object</u> 

✓ ← <u>BaseViewModel</u> ← JobViewModel

#### **Implements**

<u>INotifyPropertyChanged</u> ☐

#### **Inherited Members**

BaseViewModel.PropertyChanged, BaseViewModel.NotifyPropertyChanged(string),
object.Equals(object) ♂, object.Equals(object, object) ♂, object.GetHashCode() ♂, object.GetType() ♂,
object.MemberwiseClone() ♂, object.ReferenceEquals(object, object) ♂, object.ToString() ♂

#### **Constructors**

JobViewModel()

Initialise le JobManager

```
public JobViewModel()
```

# **Properties**

### **JobManager**

JobManager

```
public CJobManager JobManager { get; set; }
```

#### Property Value

#### **CJobManager**

### **Methods**

### CreateBackupJob(CJob)

Crée un job

```
public bool CreateBackupJob(CJob lJob)
```

**Parameters** 

1Job CJob

Returns

Vrai si le job a été crée

### DeleteJobs(List<CJob>)

Supprimer un ou plusieurs jobs

```
public bool DeleteJobs(List<CJob> pJobs)
```

**Parameters** 

pJobs <u>List</u>♂<<u>CJob</u>>

Returns

bool ♂

# LoadJobs(bool, string)

```
public void LoadJobs(bool IsDefaultFile = true, string pPath = "")
Parameters
pPath <u>string</u> ♂
RunJobs(List<CJob>)
Lance les jobs selectionnée
 public List<CJob> RunJobs(List<CJob> pJobs)
Parameters
pJobs <u>List</u> < <u>CJob</u>>
Returns
<u>List</u> ♂ < <u>CJob</u>>
  List de Job
```

# SaveJobs()

public void SaveJobs()

# Class LangueViewModel

Namespace: EasySave. ViewModels

Assembly: EasySave.dll

```
public class LangueViewModel : BaseViewModel, INotifyPropertyChanged
```

#### Inheritance

<u>object</u> 

✓ 

<u>BaseViewModel</u> 

✓ 

LangueViewModel

#### **Implements**

<u>INotifyPropertyChanged</u> 

☑

#### **Inherited Members**

#### **Constructors**

LangueViewModel()

```
public LangueViewModel()
```

### **Properties**

#### Langue

```
public CLangue Langue { get; set; }
```

Property Value

**CLangue** 

# Methods

# SetLanguage(string)

Set the current language

public bool SetLanguage(string pLanguageChoice)

#### Parameters

pLanguageChoice <u>string</u>♂

give a number

#### Returns

#### <u>bool</u> ♂

true if the language was changed

## Class MainViewModel

Namespace: <u>EasySave</u>.<u>ViewModels</u>

Assembly: EasySave.dll

public class MainViewModel

#### **Inheritance**

object 

← MainViewModel

#### **Inherited Members**

#### **Constructors**

MainViewModel()

```
public MainViewModel()
```

## **Properties**

**JobVm** 

```
public JobViewModel JobVm { get; set; }
```

Property Value

**JobViewModel** 

### LangueVm

```
public LangueViewModel LangueVm { get; set; }
```

# Property Value

<u>LangueViewModel</u>

# Namespace EasySave.Views

# Classes

**BaseView** 

ConsoleExtention

**LangueView** 

<u>View</u>

# **Class BaseView**

```
Namespace: <u>EasySave.Views</u>
Assembly: EasySave.dll

public abstract class BaseView

#### Inheritance

#### **Derived**

LangueView, View

#### **Inherited Members**

 $\underline{object.Equals(object)} \ \ \ \ \ \underline{object.Equals(object, object)} \ \ \ \ \ \underline{object.MemberwiseClone()} \ \ \ \ \underline{object.ReferenceEquals(object, object)} \ \ \ \ \underline{object.ToString()} \ \ \ \ \underline{object.ToString()} \ \ \ \ \underline{object.ToString()} \ \ \ \underline{object.ToString()} \ \ \ \underline{object.ToString()} \ \ \ \underline{object.ToString()} \ \ \underline{object.ToStrin$ 

# **Properties**

#### Title

```
public abstract string Title { get; }
```

Property Value

#### **Methods**

### Run()

Lance le deroulement de la vue dans l'interface de maniere procedurale

```
public abstract void Run()
```

### Class ConsoleExtention

```
Namespace: <u>EasySave.Views</u>
Assembly: EasySave.dll
```

```
public static class ConsoleExtention
```

#### Inheritance

<u>object</u> < ConsoleExtention

#### **Inherited Members**

### **Methods**

### Clear()

Clear the console and set the input to -1

```
public static void Clear()
```

### ReadFile(string, Regex)

Read a file with GTK CrossPlatform interface if it fail open classic Console Interface

```
public static string ReadFile(string pDescription, Regex pRegexExtentions = null)
```

#### **Parameters**

pDescription <u>string</u>♂

Description for the interface

pRegexExtentions <u>Regex</u>

☑

#### Returns

#### <u>string</u> □

return the selected file full path

### ReadFolder(string)

Read a folder with GTK CrossPlatform interface if it fail open classic Console Interface

```
public static string ReadFolder(string pDescription)
```

#### **Parameters**

#### pDescription <u>string</u>♂

Description for the interface

#### Returns

#### <u>string</u> ☑

return the selected folder full path

### ReadResponse(string, Regex?, Func<string, bool>)

Read user input char by char

```
public static string ReadResponse(string pMessage, Regex? pRegex = null, Func<string, bool>
pIsValid = null)
```

#### **Parameters**

#### pMessage <u>string</u> ✓

Message to loop through if the user makes an input error

```
pRegex Regex ♂
```

Regex permettant de validée l'entrée utilisateur

```
pIsValid <u>Func</u>♂<<u>string</u>♂, <u>bool</u>♂>
```

Fonction qui prend un string en parametre et valide l'entrée utilisateur

Returns

<u>string</u> ♂

user input

Remarks

Mahmoud Charif - 05/02/2024 - Création

# WriteLineError(string)

Write line a error in red

```
public static void WriteLineError(string pMessage)
```

#### **Parameters**

pMessage <u>string</u> ✓

message to write

### WriteLineSelected(string)

Write a default message + input

```
public static void WriteLineSelected(string pInput)
```

**Parameters** 

pInput string♂

# WriteLineSucces(string)

```
public static void WriteLineSucces(string pMessage)
```

#### **Parameters**

message to write

### WriteLineWarning(string)

WriteLine the message Warning in DarkYellow

```
public static void WriteLineWarning(string pMessage)
```

#### **Parameters**

message to write

### WritePath(string)

Write Path with UNC Format in yellow

```
public static void WritePath(string pPath)
```

#### **Parameters**

pPath <u>string</u> ♂

path to write

### WriteSubtitle(string, ConsoleColor)

WriteSubTitle

```
public static void WriteSubtitle(string pSubtitle, ConsoleColor pColor
 = ConsoleColor.DarkGray)
Parameters
pSubtitle <u>string</u> <a>™</a>
  subvtitle
pColor <u>ConsoleColor</u> □
  couleur du subtitle
WriteTitle(string, ConsoleColor)
Write a personalized Title with separator
 public static void WriteTitle(string pTitle, ConsoleColor pColor = ConsoleColor.White)
Parameters
```

Title to write

pColor <u>ConsoleColor</u> □

# Class LangueView

```
Namespace: <u>EasySave.Views</u>

Assembly: EasySave.dll

public class LangueView : BaseView

Inheritance

<u>object</u> ← <u>BaseView</u> ← LangueView
```

#### **Inherited Members**

#### **Constructors**

LangueView(LangueViewModel)

```
public LangueView(LangueViewModel pJobVm)
```

**Parameters** 

pJobVm LangueViewModel

# **Properties**

#### Title

```
public override string Title { get; }
```

Property Value

<u>string</u> □

# Methods

# ListLanguage()

Liste les langue disponibles

public void ListLanguage()

# Run()

Lance la selection du language

public override void Run()

### **Class View**

```
Namespace: <u>EasySave.Views</u>

Assembly: EasySave.dll

public class View : BaseView

Inheritance

object ← BaseView ← View

Constructors
CJob(string, string, ETypeBackup)
Constructeur de job
 public CJob(string pName, string pSourceDirectory, string pTargetDirectory,
 ETypeBackup pTypeBackup)
Parameters
pName <u>string</u> ♂
 Nom du job
pSourceDirectory <u>string</u> ✓
  Chemin source
pTargetDirectory <u>string</u> ✓
```

#### Chemin destination

```
pTypeBackup <u>ETypeBackup</u>
```

Type de sauvegarde

Remarks

Mahmoud Charif - 30/01/2024 - Création

# **Properties**

# BackupType

```
public ETypeBackup BackupType { get; set; }
```

Property Value

**ETypeBackup** 

#### Name

```
public string Name { get; set; }
```

Property Value

# SourceDirectory

```
public string SourceDirectory { get; set; }
```

Property Value

<u>string</u> ☑

### **TargetDirectory**

```
public string TargetDirectory { get; set; }
```

Property Value

<u>string</u> □

### **Methods**

### Equals(object?)

Determines whether the specified object is equal to the current object.

```
public override bool Equals(object? obj)
```

#### **Parameters**

obj <u>object</u>♂

The object to compare with the current object.

#### Returns

bool ♂

<u>true</u> if the specified object is equal to the current object; otherwise, <u>false</u>.

### Run(SauveJobs)

```
public void Run(SauveJobs pSauveJobs)
```

#### **Parameters**

pSauveJobs <u>SauveJobs</u>

## Class CJobManager

```
Namespace: Models.Backup
```

Assembly: Models.dll

```
[DataContract]
public class CJobManager
```

#### Inheritance

### **Inherited Members**

## **Constructors**

## CJobManager()

Contructeur de CJobManager initialise le chemin de sauvegarde

```
public CJobManager()
```

## **Properties**

### Jobs

```
public List<CJob> Jobs { get; }
```

## Property Value

<u>List</u> d' < <u>CJob</u>>

### Name

```
public string Name { get; set; }
Property Value
<u>string</u> ♂
SauveCollection
 public ISauve SauveCollection { get; set; }
Property Value
ISauve
Methods
CreateBackupJob(CJob)
Crée un job
 public bool CreateBackupJob(CJob lJob)
Parameters
1Job CJob
Returns
bool ♂
 true si reussi
Remarks
Mehmeti faik - 06/02/2024 - fixbug
```

## DeleteJobs(List<CJob>)

```
Supprimé un job par son index
```

```
public bool DeleteJobs(List<CJob> pJobs)
```

### **Parameters**

pJobs <u>List</u> < <u>CJob</u>>

### Returns

bool ♂

true si reussi

### Remarks

Mehmeti faik

## LoadJobs(string)

Charge les Jobs

```
public static CJobManager LoadJobs(string pPath = null)
```

### **Parameters**

pPath <u>string</u> ♂

**Absolute Path** 

### Returns

**CJobManager** 

CJobManager

## RunJobs(List<CJob>)

Lance les jobs dans un interval d'index

```
public List<CJob> RunJobs(List<CJob> pJobs)
```

Parameters

pJobs <u>List</u>♂<<u>CJob</u>>

Returns

<u>List</u> ♂ < <u>CJob</u>>

## SaveJobs()

Sauvegarde le JobManager

public void SaveJobs()

Sauvgarde

public BaseSave(string pPath)

### **Parameters**

pPath <u>string</u> ☑

**Directory Path** 

## **Properties**

### **FullPath**

```
public string FullPath { get; set; }
Property Value
<u>string</u> ☑
```

## **Options**

```
public JsonSerializerSettings Options { get; }
Property Value
JsonSerializerSettings
```

### **Methods**

CopyDirectory(DirectoryInfo, DirectoryInfo, bool, ref CLogState, bool)

```
public virtual void CopyDirectory(DirectoryInfo pSourceDir, DirectoryInfo pTargetDir, bool
pRecursive, ref CLogState pLogState, bool pForce = false)
```

**Parameters** 

pSourceDir <u>DirectoryInfo</u>♂

pTargetDir <u>DirectoryInfo</u>☑

pRecursive bool♂

pLogState <a href="CLogState">CLogState</a>

CopyDirectory(DirectoryInfo, DirectoryInfo, bool, bool)

```
Copy files and directory from the soruce path to the destinationPath
```

```
public virtual void CopyDirectory(DirectoryInfo pSourceDir, DirectoryInfo pTargetDir, bool
  pRecursive, bool pForce = false)
Parameters
pSourceDir <u>DirectoryInfo</u>♂
  Path of the directory you want tot copy
pTargetDir <u>DirectoryInfo</u>♂
  Path of the target directory
pRecursive bool♂
  True if recursive
true if overwrite
Exceptions
<u>DirectoryNotFoundException</u> 

☑
Sauver<T>(T, string, bool, string)
Crée un fichier Json par default avec les Settings
 public virtual void Sauver<T>(T pData, string pFileName, bool pAppend = false, string
 pExtention = "json")
Parameters
pData T
  Data a sauvgarde
pFileName <u>string</u> ✓
```

Name of the file

pAppend <u>bool</u>♂

pExtention <u>string</u>♂

Extention of the file can be null

Type Parameters

Т

## Class ChargerCollection

BaseSave.FullPath , BaseSave.Options , BaseSave.Sauver < T > (T, string, bool, string) , BaseSave.CopyDirectory(DirectoryInfo, DirectoryInfo, bool, bool) , BaseSave.CopyDirectory(DirectoryInfo, DirectoryInfo, bool, ref CLogState, bool) , object.Equals(object)  $\square$  , object.Equals(object, object)  $\square$  , object.GetHashCode()  $\square$  , object.GetType()  $\square$  , object.ToString()  $\square$  object.MemberwiseClone()  $\square$  , object.ReferenceEquals(object, object)  $\square$  , object.ToString()  $\square$ 

### Constructors

SauveCollection(string)

public SauveCollection(string pPath)

**Parameters** 

pPath string ☐

## Class SauveJobs

```
Namespace: <u>Stockage</u>

Assembly: Stockage.dll

public class SauveJobs : BaseSave, ISauve

Inheritance

object ← BaseSave ← SauveJobs

Implements
```

**Inherited Members** 

**ISauve** 

 $\underline{BaseSave.FullPath}\ ,\ \underline{BaseSave.Options}\ ,\ \underline{BaseSave.Sauver} < T > (T, string, bool, string)\ ,\ \underline{BaseSave.CopyDirectory(DirectoryInfo, DirectoryInfo, bool, bool)}\ ,\ \underline{object.Equals(object)} \ ,\ \underline{object.GetHashCode()} \ ,\ \underline{object.GetType()} \ ,\ \underline{object.MemberwiseClone()} \ ,\ \underline{object.ReferenceEquals(object, object)} \ ,\ \underline{object.ToString()} \ .$ 

### Constructors

SauveJobs(string)

```
public SauveJobs(string pPath)
```

**Parameters** 

pPath string ☐

## **Properties**

### TransferedFiles

```
public int TransferedFiles { get; set; }
```

### **Methods**

## CopyDirectory(DirectoryInfo, DirectoryInfo, bool, ref CLogState, bool)

Copy files and directory from the soruce path to the destinationPath

```
public override void CopyDirectory(DirectoryInfo pSourceDir, DirectoryInfo pTargetDir, bool
pRecursive, ref CLogState pLogState, bool pForce = false)
```

### **Parameters**

pSourceDir <u>DirectoryInfo</u>♂

Path of the directory you want tot copy

pTargetDir <u>DirectoryInfo</u>♂

Path of the target directory

pRecursive bool♂

True if recursive

pLogState <a href="CLogState">CLogState</a>

true if overwrite

## Exceptions

## GetDirSize(string)

```
public long GetDirSize(string pPath)
```

Parameters

pPath <u>string</u> ♂

Returns

<u>long</u> ☑

## UpdateLog(CLogState)

public void UpdateLog(CLogState logState)

Parameters

logState <a href="CLogState">CLogState</a>

## Namespace Stockage.Converters

## Classes

<u>ConcreteCollectionTypeConverter<TCollection, Tltem, TBaseItem></u>

Concrete Collection Converter

### <u>ConcreteConverter<TInterface, TConcrete></u>

This convert can be used on any interface definition to instruct the JSON serializer to use a specific concrete class when deserializing the instance. The type specified by TConcrete must implement the interface specified by TInterface.

<u>ConcreteDictionnaryTypeConverter<TDictionary, TItem, TKey, TValue></u>

Concrete dictionnaryConverter

## Class

# ConcreteCollectionTypeConverter<TCollection, TItem, TBaseItem>

Namespace: <u>Stockage.Converters</u>

Assembly: Stockage.dll

Concrete Collection Converter

```
public class ConcreteCollectionTypeConverter<TCollection, TItem, TBaseItem> : JsonConverter
where TCollection : ICollection<TBaseItem>, new() where TItem : TBaseItem
```

### Type Parameters

**TCollection** 

Collection

**TItem** 

Item de la collection

**TBaseItem** 

Item de base

### Inheritance

 $\underline{object} \boxtimes \leftarrow JsonConverter \leftarrow ConcreteCollectionTypeConverter < TCollection, TItem, TBaseItem > to the contract of the contr$ 

### **Inherited Members**

```
JsonConverter.CanRead\ ,\ JsonConverter.CanWrite\ ,\ \underline{object.Equals(object)}\ \ \overrightarrow{c}\ ,\ \underline{object.Equals(object,\ object)}\ \ \overrightarrow{c}\ ,\ \underline{object.GetHashCode()}\ \ \overrightarrow{c}\ ,\ \underline{object.GetType()}\ \ \overrightarrow{c}\ ,\ \underline{object.MemberwiseClone()}\ \ \overrightarrow{c}\ ,\ \underline{object.ReferenceEquals(object,\ object)}\ \ \overrightarrow{c}\ ,\ \underline{object.ToString()}\ \ \overrightarrow{c}\ ,\ \underline{object.MemberwiseClone()}\ \ \overrightarrow{c}\ ,\ \underline{object.ReferenceEquals(object,\ object)}\ \ \overrightarrow{c}\ ,\ \underline{object.ToString()}\ \ \overrightarrow{c}\ ,\ \underline{object.ReferenceEquals(object,\ object)}\ \ \ \ \underline{object.ReferenceEquals(object,\ object)}\ \ \ \underline{c}\ \
```

### Remarks

Mahmoud Charif - 31/12/2022 - Creation

### **Methods**

## CanConvert(Type)

Can convert

public override bool CanConvert(Type objectType)

**Parameters** 

objectType <u>Type</u>♂

Returns

bool ♂

## ReadJson(JsonReader, Type, object, JsonSerializer)

ReadJson

public override object ReadJson(JsonReader reader, Type objectType, object existingValue, JsonSerializer serializer)

### **Parameters**

reader JsonReader

objectType <u>Type</u>♂

existingValue <u>object</u>♂

serializer JsonSerializer

Returns

<u>object</u> ♂

## WriteJson(JsonWriter, object, JsonSerializer)

Writes the JSON representation of the object.

public override void WriteJson(JsonWriter writer, object value, JsonSerializer serializer)

### Parameters

writer JsonWriter

The Newtonsoft.Json.JsonWriter to write to.

value <u>object</u>♂

The value.

serializer JsonSerializer

The calling serializer.

## Class ConcreteConverter < TInterface, TConcrete >

Namespace: Stockage.Converters

Assembly: Stockage.dll

This convert can be used on any interface definition to instruct the JSON serializer to use a specific concrete class when deserializing the instance. The type specified by TConcrete must implement the interface specified by TInterface.

```
public class ConcreteConverter<TInterface, TConcrete> : JsonConverter where TConcrete :
TInterface, new()
```

## Type Parameters

### **TInterface**

The Type that was serialized into the JSON text.

### **TConcrete**

The Type that specifies the class that will be created.

### Inheritance

### **Inherited Members**

<u>object.Equals(object)</u> <u>object.Equals(object, object)</u> <u>object.GetHashCode()</u> <u>object.GetType()</u> <u>object.MemberwiseClone()</u> <u>object.ReferenceEquals(object, object)</u> <u>object.ToString()</u> <u>object.ToString() object.ToString() ob</u>

## **Properties**

### CanRead

Gets a value indicating whether this Newtonsoft. Json. Json Converter can read.

```
public override bool CanRead { get; }
```

### Property Value

**bool** ☑

### CanWrite

Gets a value indicating whether this Newtonsoft. Json. Json Converter can write JSON.

```
public override bool CanWrite { get; }
```

Property Value

bool₫

## **Methods**

## CanConvert(Type)

Determines whether this instance can convert the specified object type.

```
public override bool CanConvert(Type objectType)
```

**Parameters** 

objectType <u>Type</u>♂

Type of the object.

Returns

bool₫

Returns true if this instance can convert the specified object type, false otherwise.

## ReadJson(JsonReader, Type, object?, JsonSerializer)

Reads the JSON representation of the object.

```
public override object ReadJson(JsonReader reader, Type objectType, object? existingValue,
JsonSerializer serializer)
```

### **Parameters**

reader JsonReader

The Newtonsoft. Json. Json Reader to read from.

objectType <u>Type</u>♂

Type of the object.

existingValue <u>object</u>♂

The existing value of object being read.

serializer JsonSerializer

The calling serializer.

### Returns

The object value.

## WriteJson(JsonWriter, object?, JsonSerializer)

Writes the JSON representation of the object.

public override void WriteJson(JsonWriter writer, object? value, JsonSerializer serializer)

### **Parameters**

writer JsonWriter

The Newtonsoft. Json. Json Writer to write to.

value <u>object</u>♂

The value.

### serializer JsonSerializer

The calling serializer.

## Class

# ConcreteDictionnaryTypeConverter<TDictionary, TItem, TKey, TValue>

Namespace: <u>Stockage</u>.<u>Converters</u>

Assembly: Stockage.dll

Concrete dictionnaryConverter

```
public class ConcreteDictionnaryTypeConverter<TDictionary, TItem, TKey, TValue> :
JsonConverter where TDictionary : IDictionary<TKey, TValue>, new() where TItem : TValue
```

### Type Parameters

**TDictionary** 

**TItem** 

TKey

**TValue** 

### Inheritance

<u>object</u> ✓ ← JsonConverter ← ConcreteDictionnaryTypeConverter < TDictionary, TItem, TKey, TValue >

### **Inherited Members**

JsonConverter.CanRead , JsonConverter.CanWrite , <u>object.Equals(object)</u> , <u>object.Equals(object, object)</u> , <u>object.GetHashCode()</u> , <u>object.GetType()</u> , <u>object.MemberwiseClone()</u> , <u>object.ReferenceEquals(object, object)</u> , <u>object.ToString()</u>

### **Methods**

## CanConvert(Type)

CanConvert

public override bool CanConvert(Type objectType)

**Parameters** objectType <u>Type</u>♂ Returns bool₫ ReadJson(JsonReader, Type, object?, JsonSerializer) ReadJson public override object ReadJson(JsonReader reader, Type objectType, object? existingValue, JsonSerializer serializer) **Parameters** reader JsonReader objectType <u>Type</u>♂ existingValue <u>object</u>♂ serializer JsonSerializer Returns <u>object</u> ♂ WriteJson(JsonWriter, object?, JsonSerializer) WriteJson public override void WriteJson(JsonWriter writer, object? value, JsonSerializer serializer)

### **Parameters**

writer JsonWriter

value <u>object</u>♂

serializer JsonSerializer

## Namespace Stockage.Logs

## Classes

<u>BaseLogger<T></u>

BaseLogger

<u>CGenericLogger<T></u>

<u>CLogger<T></u>

<u>CStringLogger</u>

## **Interfaces**

<u>ILogger<T></u>

## Class BaseLogger<T>

```
Namespace: Stockage.Logs

Assembly: Stockage.dll

BaseLogger

public abstract class BaseLogger<T>: ILogger<T>

Type Parameters

T

Type du Logger

Inheritance

object ← BaseLogger<T>

Implements

ILogger<T>

Derived
```

### **Inherited Members**

CGenericLogger<T>, CStringLogger

### **Constructors**

BaseLogger()

protected BaseLogger()

## **Properties**

**Datas** 

```
public ObservableCollection<T> Datas { get; }
```

## Property Value

ObservableCollection < < T>

## **Methods**

## Clear()

```
public virtual void Clear()
```

## Log(T, bool, bool, string)

```
public virtual void Log(T pData, bool pSerialize = true, bool pAppend = true, string
pFileName = "Logs")
```

### Parameters

pData T

pSerialize <u>bool</u>♂

pAppend <u>bool</u>♂

pFileName <u>string</u>♂

## Class CGenericLogger<T>

```
Namespace: Stockage.Logs
Assembly: Stockage.dll

public class CGenericLogger<T>: BaseLogger<T>, ILogger<T>

Type Parameters

T

Inheritance
object  ← BaseLogger<T> ← CGenericLogger<T>
```

### **Implements**

<u>ILogger</u><T>

### **Inherited Members**

 $\underline{BaseLogger < T > .Datas}, \underline{BaseLogger < T > .Log(\underline{T}, \underline{bool}, \underline{bool}, \underline{string})}, \underline{BaseLogger < T > .Clear(\underline{)}}, \underline{object.Equals(object)} , \underline{object.Equals(object}, \underline{object}, \underline{object.GetHashCode(\underline{)}} , \underline{object.GetType(\underline{)}} , \underline{object.MemberwiseClone(\underline{)}} , \underline{object.ReferenceEquals(object}, \underline{object}, \underline{object.ToString(\underline{)}}$ 

## Class CLogger<T>

<u>CStringLogger</u>

```
Namespace: Stockage.Logs
Assembly: Stockage.dll
            public static class CLogger<T>
 Type Parameters
 Т
Inheritance
 <u>object</u> d ← CLogger<T>
 Inherited Members
\underline{object.Equals(object)} \, \underline{r} \,\, , \, \underline{object.Equals(object, object)} \, \underline{r} \,\, , \, \underline{object.GetHashCode()} \, \underline{r} \,\, , \, \underline{object.GetType()} \, \underline{r} \,\, , \, \underline{object.GetHashCode()} \, \underline{r} \,\, , \, \underline{object.GetType()} \, \underline{r} \,\, , \, \underline{object.GetType()} \, \underline{r} \,\, , \, \underline{object.GetType()} \, \underline{r} \,\, , \, \underline{object.GetHashCode()} \, \underline{r} \,\, , \, \underline{object.GetType()} \, \underline{r} \,\, , \, \underline{object.GetHashCode()} \, \underline{r} \,\, , \, \underline{object.GetType()} \, \underline{r} \,\, , \, \underline{ob
Properties
 GenericLogger
            public static CGenericLogger<T> GenericLogger { get; }
 Property Value
CGenericLogger<T>
 StringLogger
            public static CStringLogger StringLogger { get; }
 Property Value
```

## Methods

## Clear()

public static void Clear()

## Class CStringLogger

Namespace: <u>Stockage.Logs</u>

Assembly: Stockage.dll

```
public class CStringLogger : BaseLogger<string>, ILogger<string>
```

### Inheritance

<u>object</u> ♂ ← <u>BaseLogger</u> < <u>string</u> ♂ > ← CStringLogger

### **Implements**

<u>lLogger</u><<u>string</u> □ >

### **Inherited Members**

## Interface ILogger<T>

```
Namespace: Stockage,Logs
Assembly: Stockage.dll

public interface ILogger<T>
Type Parameters
T
```

## **Properties**

### **Datas**

```
ObservableCollection<T> Datas { get; }

Property Value

ObservableCollection ✓ <T>
```

## **Methods**

```
Log(T, bool, bool, string)
```

```
void Log(T pData, bool pSerialize, bool pAppend = true, string pFileName = "Logs")

Parameters
pData T
pSerialize bool@
pAppend bool@
pFileName string@
```

## Namespace UnitTestJobs

## Classes

<u>JobsTestUnit</u>

## Class JobsTestUnit

Namespace: <u>UnitTestJobs</u>
Assembly: UnitTestJobs.dll

```
public class JobsTestUnit
```

### Inheritance

<u>object</u> 

✓ JobsTestUnit

### **Inherited Members**

 $\underline{object.Equals(object)} \ \ \ \ \ \underline{object.Equals(object, object)} \ \ \ \ \ \underline{object.MemberwiseClone()} \ \ \ \ \underline{object.ReferenceEquals(object, object)} \ \ \ \ \underline{object.ToString()} \ \ \ \ \underline{object.ToString()} \ \ \ \ \underline{object.ToString()} \ \ \ \underline{object.ToString()} \ \ \ \underline{object.ToString()} \ \ \ \underline{object.ToString()} \ \ \underline{object.ToStrin$ 

## **Methods**

## CreateJob()

```
[Fact]
public void CreateJob()
```

## SaveJobManager()

```
[Fact]
public void SaveJobManager()
```

## Namespace UnitTestStorage

## Classes

<u>StockageTestUnit</u>

## Class StockageTestUnit

Namespace: <u>UnitTestStorage</u>
Assembly: UnitTestStorage.dll

public class StockageTestUnit

### Inheritance

<u>object</u> 

✓ StockageTestUnit

### **Inherited Members**

 $\underline{object.Equals(object)} \ \ \ \ \ \underline{object.Equals(object, object)} \ \ \ \ \ \underline{object.MemberwiseClone()} \ \ \ \ \underline{object.ReferenceEquals(object, object)} \ \ \ \ \underline{object.ToString()} \ \ \ \ \underline{object.ToString()} \ \ \ \ \underline{object.ToString()} \ \ \ \underline{object.ToString()} \ \ \ \underline{object.ToString()} \ \ \ \underline{object.ToString()} \ \ \underline{object.ToStrin$ 

## **Methods**

TestSerialisation()

[Fact]
public void TestSerialisation()
